MECHANIKA III

"RÓWNANIA LA GRANGE'A II RODZAJU"

PROJEKT

Oblicz:

- równanie ruchu
- częstość drgań własnych

dla układu mechanicznego.

DANE:

$$m, l = OK$$

SZUKAM:

$$\varphi_1(t), \omega_0 = ?$$

437

$D: m, l = \checkmark$

52: $\varphi(t) = ?$

$\omega_0 = ?$

1) момент инерции точки.

$$\frac{d}{dt} \left(\frac{dl}{d\dot{\varphi}} \right) - \frac{dl}{d\varphi} = 0$$

$$\frac{1}{3} ml^2 \ddot{\varphi} - \left(-\frac{1}{2} mgl \sin \varphi \right) = 0$$

$$\frac{1}{3} ml^2 \ddot{\varphi} + \frac{1}{2} mgl \sin \varphi = 0 \quad | \cdot \frac{3}{ml^2}$$

$$\ddot{\varphi}(t) + \left(\frac{3g}{2l} \right) \varphi(t) = 0$$

$$\omega_0 = \sqrt{\frac{3g}{2l}}$$

2) механика.

$$\frac{d}{dt} \left(\frac{dl}{d\dot{\varphi}} \right) - \frac{dl}{d\varphi} = Q \Rightarrow \frac{d}{dt} \left(\frac{dl}{d\dot{\varphi}} \right) - \frac{dl}{d\varphi} = 0$$

$\varphi = \varphi$

$$L = E_k - E_p$$

$$\begin{cases} E_k = \frac{1}{2} \bar{I}_L^{(O_2)} \dot{\varphi}^2 \\ E_p = mgh \end{cases}$$

$$h = \frac{1}{2} l - k \quad ; \quad \frac{k}{\frac{1}{2} l} = \cos \varphi \Rightarrow k = \frac{1}{2} l \cos \varphi$$

$$h = \frac{1}{2} l - \frac{1}{2} l \cos \varphi = \frac{1}{2} l (1 - \cos \varphi)$$

$$\bar{I}_L^{(O_2)} = ?$$

$$\bar{I}_L^{(O_2)} = \bar{I}_L^{(O_1)} + m(l)^2$$

$$\bar{I}_L^{(O_2)} = \frac{1}{12} ml^2 + m \left(\frac{1}{2} l \right)^2$$

$$\bar{I}_L^{(O_2)} = \frac{1}{12} ml^2 + \frac{1}{4} ml^2 = \frac{1}{3} ml^2$$

$$\begin{aligned} L = E_k - E_p &= \frac{1}{2} \cdot \frac{1}{3} ml^2 \dot{\varphi}^2 - mgh = \frac{1}{6} ml^2 \dot{\varphi}^2 - \frac{1}{2} mgl (1 - \cos \varphi) \\ &= \frac{1}{6} ml^2 \dot{\varphi}^2 + \frac{1}{2} mgl \cos \varphi - \frac{1}{2} mgl \end{aligned}$$

$$\frac{dl}{d\dot{\varphi}} = -\frac{1}{2} mgl \sin \varphi$$

$$\frac{dl}{d\varphi} = \frac{1}{3} ml^2 \dot{\varphi}$$

$$\frac{d}{dt} \left(\frac{dl}{d\dot{\varphi}} \right) = \frac{1}{3} ml^2 \ddot{\varphi}$$
